

How to Reboot your ESPN XDS Satellite receiver

From Main Menu press Set (twice if back light is off) or Up Arrow from Status Menu

Right Arrow to Setup - Press "SET"

Left Arrow to Reboot - Press "SET"

Press (Yes) for a soft "Reboot" where the power remains on, receiver reboots, loads new update if needed. One way to know if there has been a new updated version is to see the amber LED on the front panel blinking rapidly. If it is blinking slowly, it's in the process of an update download. When done, the blinking turns rapid and ready for a reboot.

For a full shutdown, the power must be pulled from the XDS satellite receiver, wait 15 seconds, then apply the power (plug in to AC).
