

Picture Day is just the start: Manage images, data and more.

The Lifetouch Portal offers a reliable, protected way to store and access school images and data

Simplify your school picture management.

The Lifetouch Portal not only stores your students' school pictures and information, but this secure web-based system also ensures you have student data in one protected place. Plus, you'll be able to repurpose the images and data information to create ID Cards, recognition certificates and more right in the Portal.

Keep your student data secure

Forget the hassle of unsecure CDs or emails for managing school pictures. With the Lifetouch Portal, your Picture Day images are available in a completely secure, web-based application.

To ensure privacy and security, we designed and maintain our portal using the Software & Information Industry Association's best practices for the Safeguarding of Student Information Privacy and Security for Providers of School Services.

Create with complete control

The Portal allows users to securely access student images and data to easily create ID cards, class seating charts and other administrative resources.

Designated users can even view and download school-specific flyers and web banners from Portal.

Plus, the Lifetouch Portal includes Parent Notify - a unique feature that allows you to keep families completely informed about Picture Day through automated reminder emails sent on behalf of your school.

Personalized recognition for your students

The Lifetouch Portal also includes pre-designed templates to create certificates customized with the student's school picture to recognize achievements, or custom bookmarks to promote and reward reading activities.
