

# Take Action on Your Biggest Inventory Opportunities with LeanDNA's Inventory Optimization Workflows

When demand changes fast, and today's priorities may be wrong tomorrow, there's no time to waste. Yet, your biggest inventory opportunities rely on your buyers' abilities to respond to changing production plans, mitigate ongoing risk, and find ways to free up cash. And today, they do this with little accountability or consistency in their workflows.

The results? Buyers:

- Use a hodgepodge of tools to uncover inventory opportunities and feel stuck in analysis paralysis
- Duplicate work due to inconsistent processes and an inability to prioritize daily tasks
- Guess on valuable optimization actions to reach time-bound goals

LeanDNA's configurable, role-based workflows standardize and optimize the daily work of supply chain teams, automatically prioritizing urgent inventory actions for critical factory inventory management roles.

- Replace manual work with rich root-cause analysis
- Configure frontline teams' daily tasks to align with inventory optimization targets
- Resolve parts in urgent need of optimization and those with the largest opportunity for reduction

*Empower teams to focus on priorities at each site, and then standardize rules across your organization, gaining agility.*

## Purpose-Built Inventory Optimization Workflows are Designed to:

### Simplify and Standardize Work Processes

Drive consistent work across your organization, using automated recommendations to ensure teams prioritize the most critical opportunities each day.

### Establish Operational Command

Keep a pulse on action status, comments, assignments, and ongoing collaboration of tasks to ensure teams remain accountable to goals and focused on the right priorities.

### Align Daily Work to Organizational Goals

Configure and surface your team's largest, prioritized daily inventory opportunities to continuously prevent shortages and reduce excess inventory.

“LeanDNA's inventory optimization view instantly allows me and the executive team to drill down and have complete visibility into the root causes and trends of our inventory. Our team is able to see a full view of our operation instantly, so we can focus on controlling costs, managing oversight, and improving on-time delivery without spending hours tracking down required information.”

— Darren Hill, VP of Supply Chain, Radius Aerospace

## How Can Workflows Give You Control over Inventory Operations?

Empower managers to understand team performance and identify top opportunities to optimize inventory.

### Configure workflows with priorities in mind

Tune *actionability settings* to prioritize and assign actions based on role, value, company goals, team policies, and best practices. Control the volume of recommendations and their cadence to ensure teams are working productively.

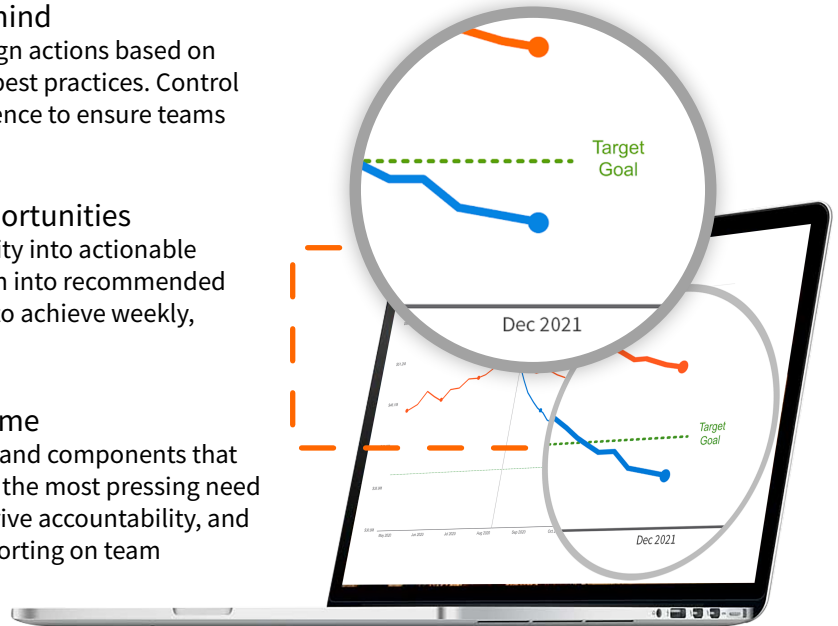

### See projected actionable inventory opportunities

With the *Inventory Optimization view*, get visibility into actionable opportunities to free working capital. Drill down into recommended inventory actions to right-size inventory levels to achieve weekly, monthly, and yearly targets.

### Track progress and performance over time

Proactively manage problematic order policies and components that are either over or under target quantity or have the most pressing need for optimization. Monitor team performance, drive accountability, and measure progress toward goals with robust reporting on team activities, task assignments, and action status.

## How Can Your Teams Boost Productivity?

Standardize frontline teams' daily work processes, improving efficiency.

### Find daily opportunities in My Work view

Buyers start each day in the *My Work view*, where they find prioritized inventory *actions* and tasks in a configurable opportunity list to manage and execute.

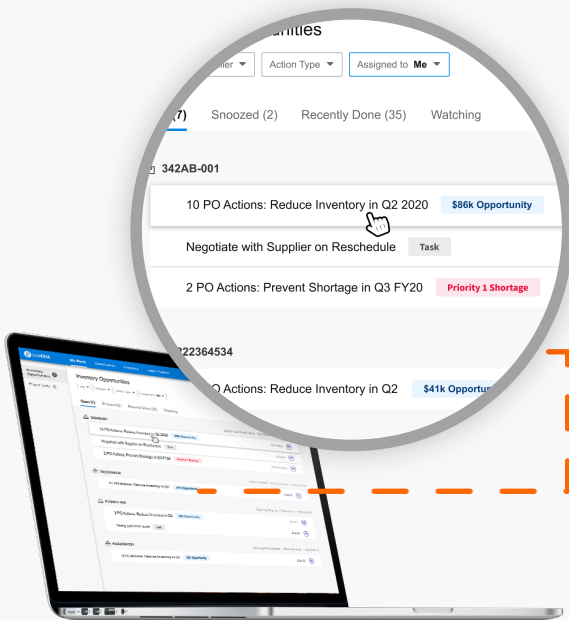

### Take action and collaborate with smart PO-level recommendations

Prescribed actions in the *Item Opportunity view* recommend when to purchase, cancel, or split orders. Buyers can drill into details that matter and take action on recommendations, snooze tasks until later, leave comments, and update action status.

### Solve root cause of inventory issues with dashboards and analytics

Purpose-built workflows and dashboards for every role enable teams to track trends and identify the root cause of issues. Automatically surface recommendations to proactively manage shortages, update delivery schedules, optimize PFEP processes, and more.
