

Séminaire Smart Governance

Data Visualisation: efficacité, bonnes pratiques et outils

Bruno Dumas

Bruno Dumas

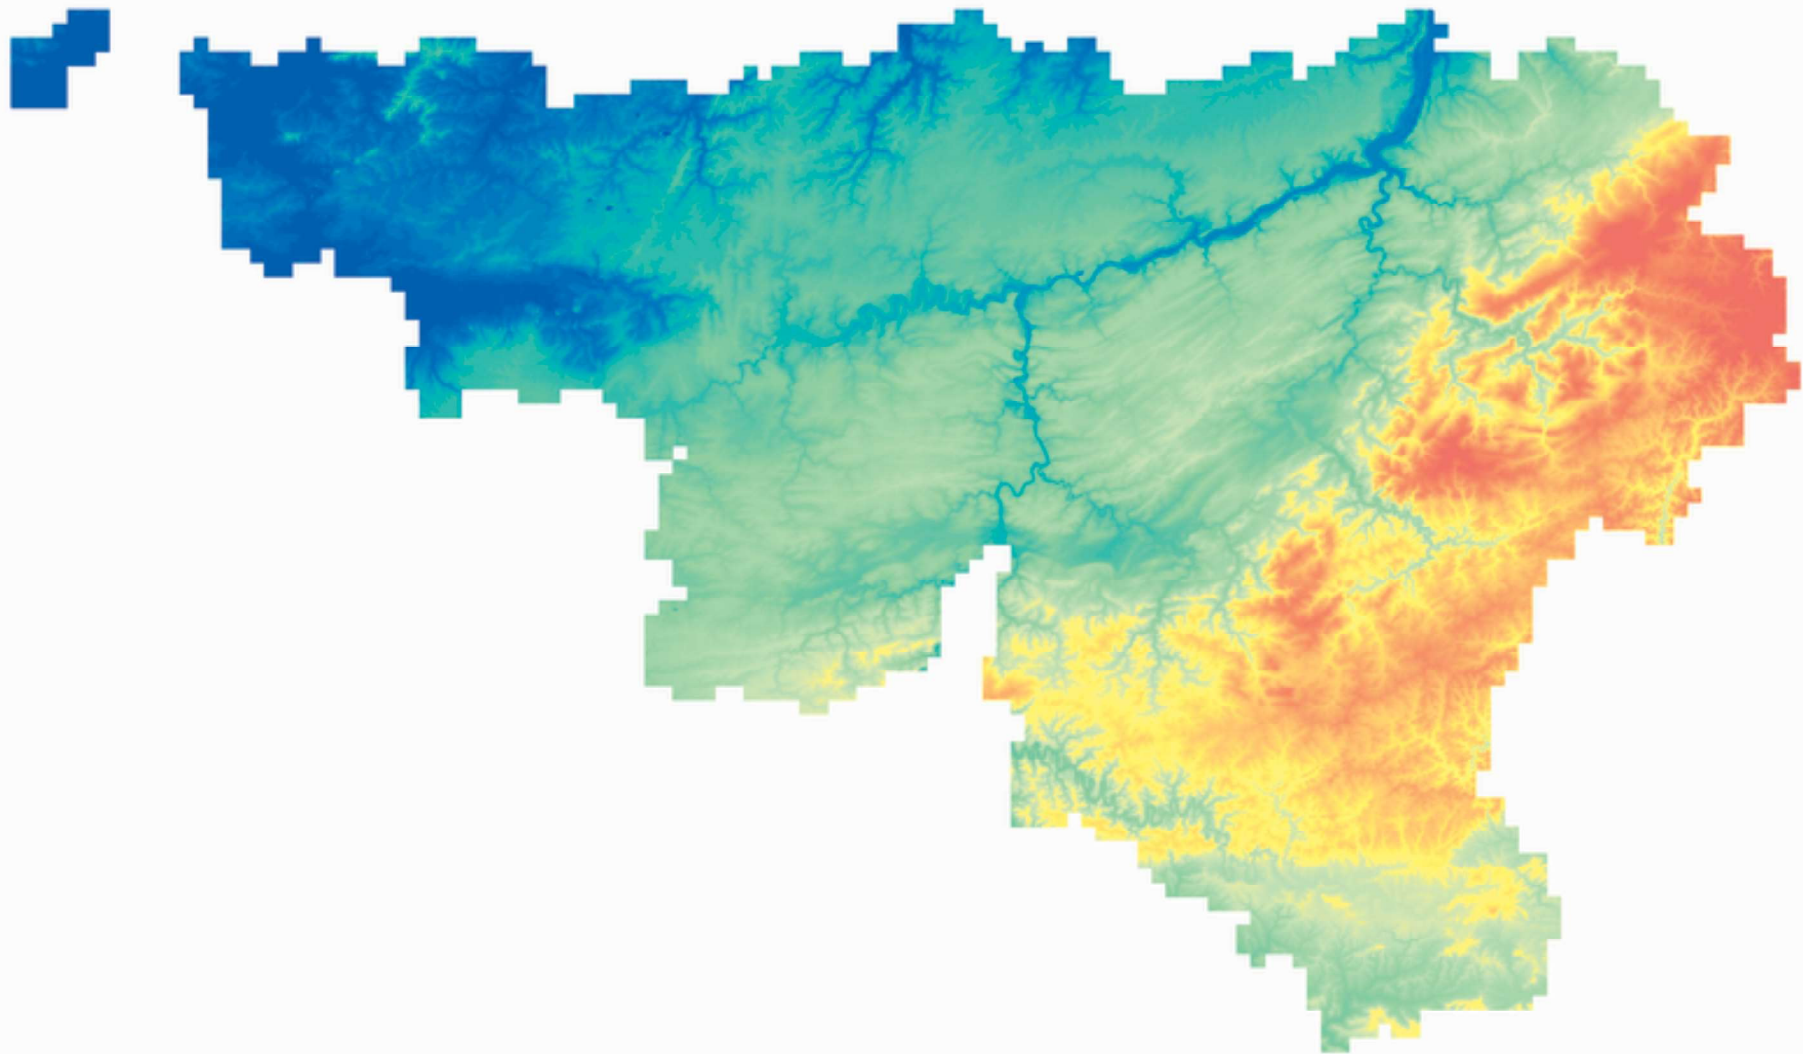

- Associate professor
@computer science faculty,
University of Namur
- <https://www.linkedin.com/in/brunodumas/>
- Fields of Expertise
 - Multimodal interaction
 - Interface adaptation to user and context
 - Tangible user interfaces
 - Information visualisation
 - Augmented reality

Artvis tangible exploration tool

Infophys tangible visualisation

<http://geoportail.wallonie.be/catalogue/6029e738-f828-438b-b10a-85e67f77af92.html>

Human Vision

- Highest bandwidth sense
 - Fast, parallel
 - Pattern recognition
 - Extends memory and cognitive capacity
 - People think visually
- The Challenge
 - Transform the data into information (understanding, insight) thus making it useful to people
- Example:
 - Which state has the highest income?
 - Is there a relationship between income and education?

State	College Degree %	Per Capita Income
Alabama	20.6%	11486
Alaska	30.3%	17610
Arizona	27.1%	13461
Arkansas	17.0%	10520
California	31.3%	16409
Colorado	33.9%	14821
Connecticut	33.8%	20189
Delaware	27.9%	15854
District of Columbia	36.4%	18881
Florida	24.9%	14698
Georgia	24.3%	13631
Hawaii	31.2%	15770
Idaho	25.2%	11457
Illinois	26.8%	15201
Indiana	20.9%	13149
Iowa	24.5%	12422
Kansas	26.5%	13300
Kentucky	17.7%	11153
Louisiana	19.4%	10635
Maine	25.7%	12957
Maryland	31.7%	17730
Massachusetts	34.5%	17224
Michigan	24.1%	14154
Minnesota	30.4%	14389
Mississippi	19.9%	9648
Missouri	22.3%	12989
Montana	25.4%	11213
Nebraska	26.0%	12452
Nevada	21.5%	15214
New Hampshire	32.4%	15959
New Jersey	30.1%	18714
New Mexico	25.5%	11246
New York	29.6%	16501
North Carolina	24.2%	12885
North Dakota	28.1%	11051
Ohio	22.3%	13461
Oklahoma	22.8%	11893
Oregon	27.5%	13418
Pennsylvania	23.2%	14068
Rhode Island	27.5%	14981
South Carolina	23.0%	11897
South Dakota	24.6%	10661
Tennessee	20.1%	12255
Texas	25.5%	12904
Utah	30.0%	11029
Vermont	31.5%	13527
Virginia	30.0%	15713
Washington	30.9%	14923
West Virginia	16.1%	10520
Wisconsin	24.9%	13276
Wyoming	25.7%	12311

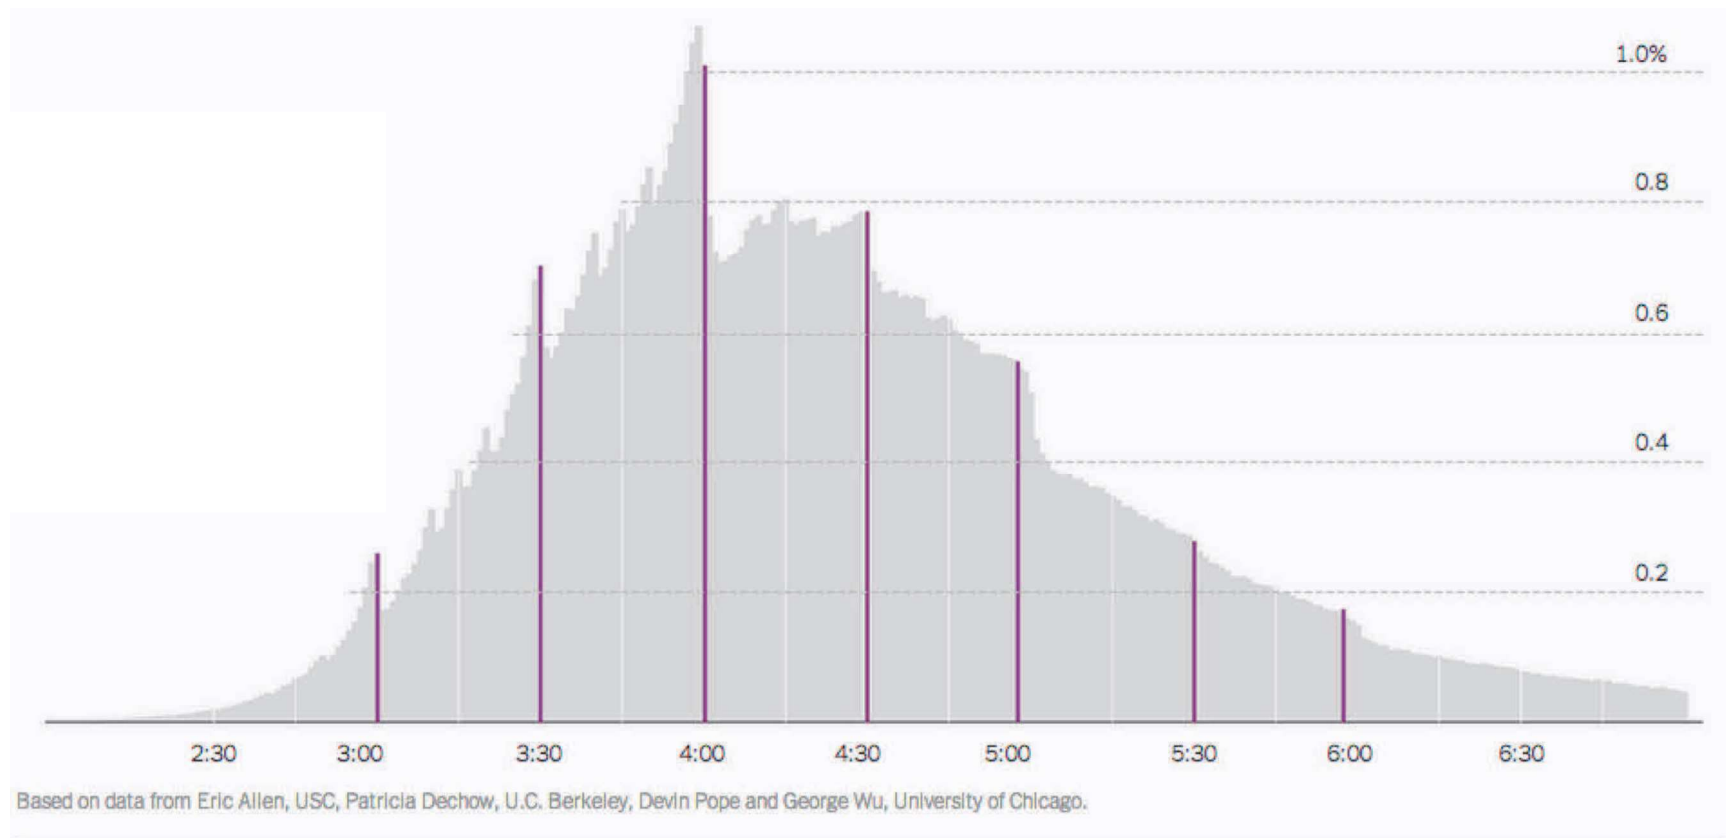

Human Vision (cont.)

Use Case: A (Marathonian) Example

Use Case: A (Marathonian) Example

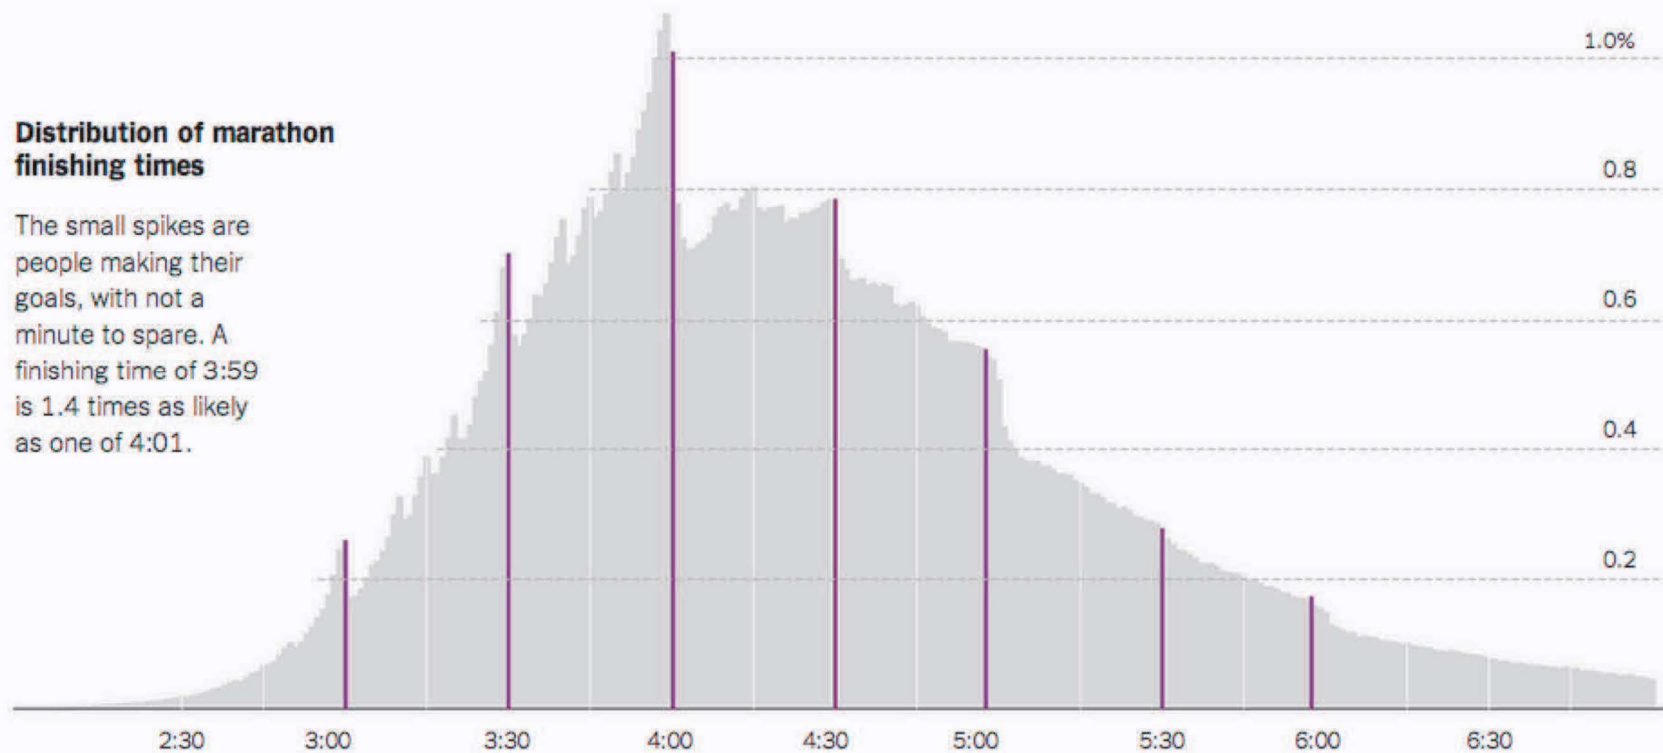

Use Case: A (Marathonian) Example

Arbitrary goals, like round numbers, can be motivating – just ask 9 million marathoners.

Distribution of marathon finishing times

The small spikes are people making their goals, with not a minute to spare. A finishing time of 3:59 is 1.4 times as likely as one of 4:01.

Based on data from Eric Allen, USC, Patricia Dechow, U.C. Berkeley, Devin Pope and George Wu, University of Chicago.

Use Case: A Day In the Life of Americans

<http://flowingdata.com/2015/12/15/a-day-in-the-life-of-americans/>

Use Case: WSJ Infectious Diseases and Vaccines

Measles

<http://graphics.wsj.com/infectious-diseases-and-vaccines/>

Use Case: Purchases in 2014 from Swiss Federal Administration

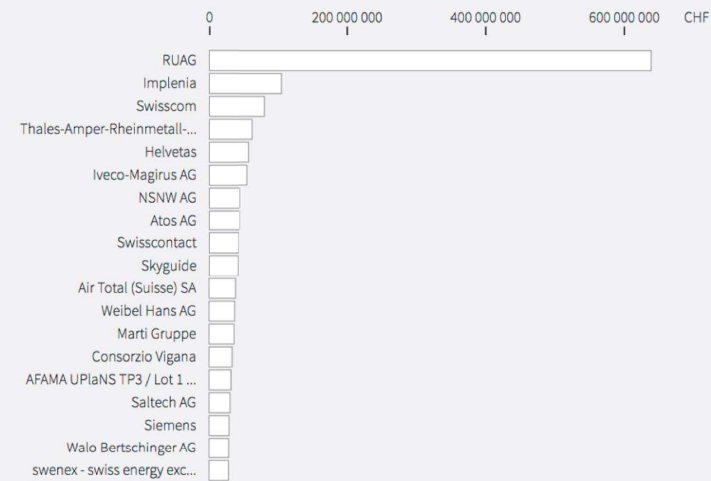

Home Federal Administration

Purchases 2014 from Federal Administration

Total purchases	CHF	5 492 353 868
of which the suppliers are known	CHF	2 771 844 519 50%
of which the suppliers are unknown	CHF	2 720 509 350 50%

The main suppliers

Choose a department or a federal office:

- Federal Department of Finance

Choose a year:

2011 2012 2013 **2014**

Roles of Infovis

- Exploration
 - Prerequisite: domain knowledge
 - Outcome: new hypothesis
- Confirmation
 - Prerequisite: hypothesis
 - Outcome: confirmation/rejection (new hypothesis)
- Communication
 - Prerequisite: confirmed hypothesis
 - Outcome: clear visualisation
- Visual Analytics' Motto: *detect the expected and discover the unexpected*

Keim, Daniel A. "Information visualization and visual data mining." IEEE transactions on Visualization and Computer Graphics 8, no. 1 (2002): 1-8.

Interactivity

- Interactivity is crucial for handling complexity
 - Typically when data is large enough...
- Interactivity involves
 - Changing representations
 - Zooming
 - Filtering
 - Getting details
 - Summarizing
 - Combining views
 - ...

A Three-Part Analysis Framework

A Three-Part Analysis Framework

- WHAT data the user sees
 - Aka the data
- WHY the user intends to use a vis tool
 - Aka the task
- HOW the visual encoding and interaction idiom are constructed
 - Aka the visual idiom and interaction

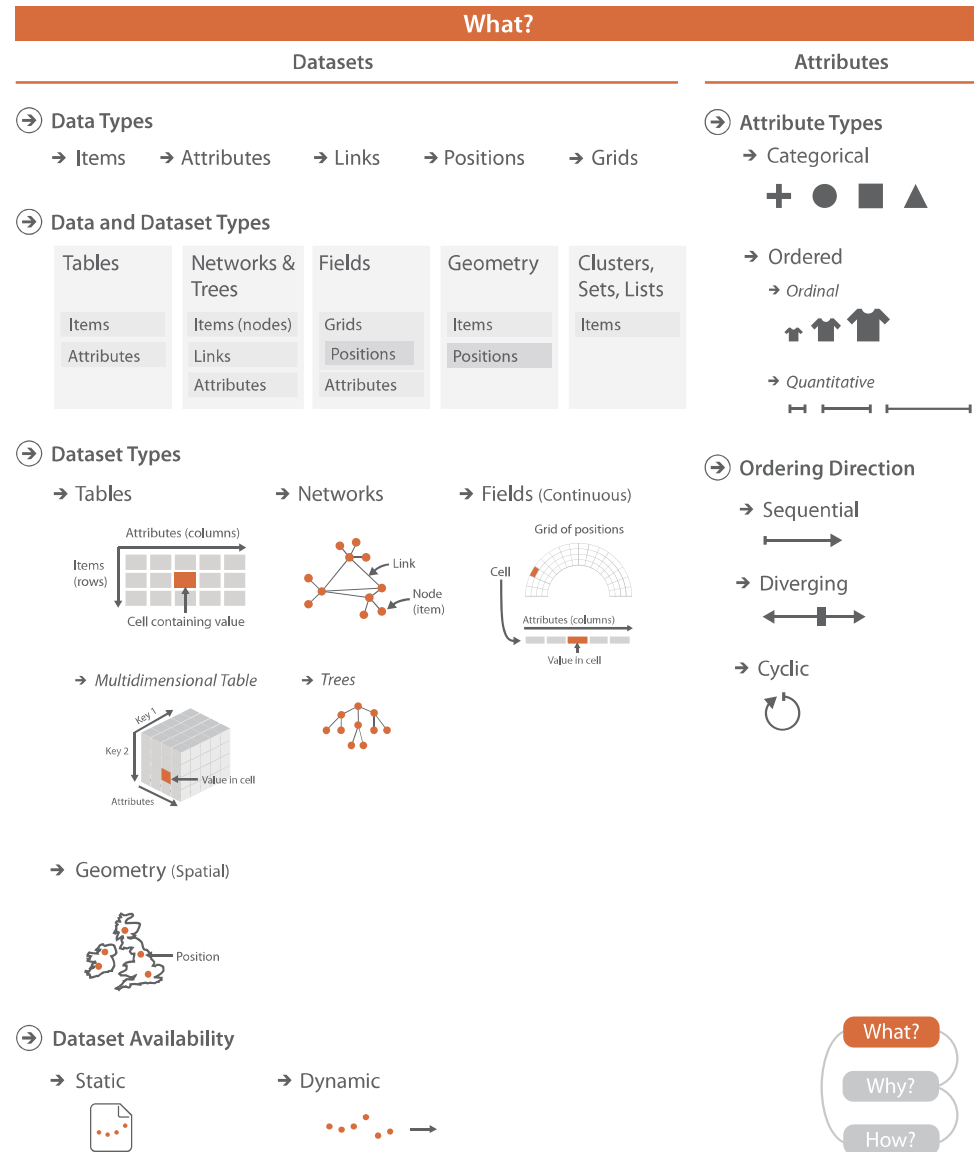

A Simple Example:

1. Data

- Datasets
 - Data types
 - Data and dataset types
 - Dataset types
 - Dataset availability
- Attributes
 - Attribute types
 - Ordering Direction

Datasets: Dataset Types

→ Dataset Types

→ Tables

→ Networks

→ Fields (Continuous)

→ Geometry (Spatial)

→ *Multidimensional Table*

→ *Trees*

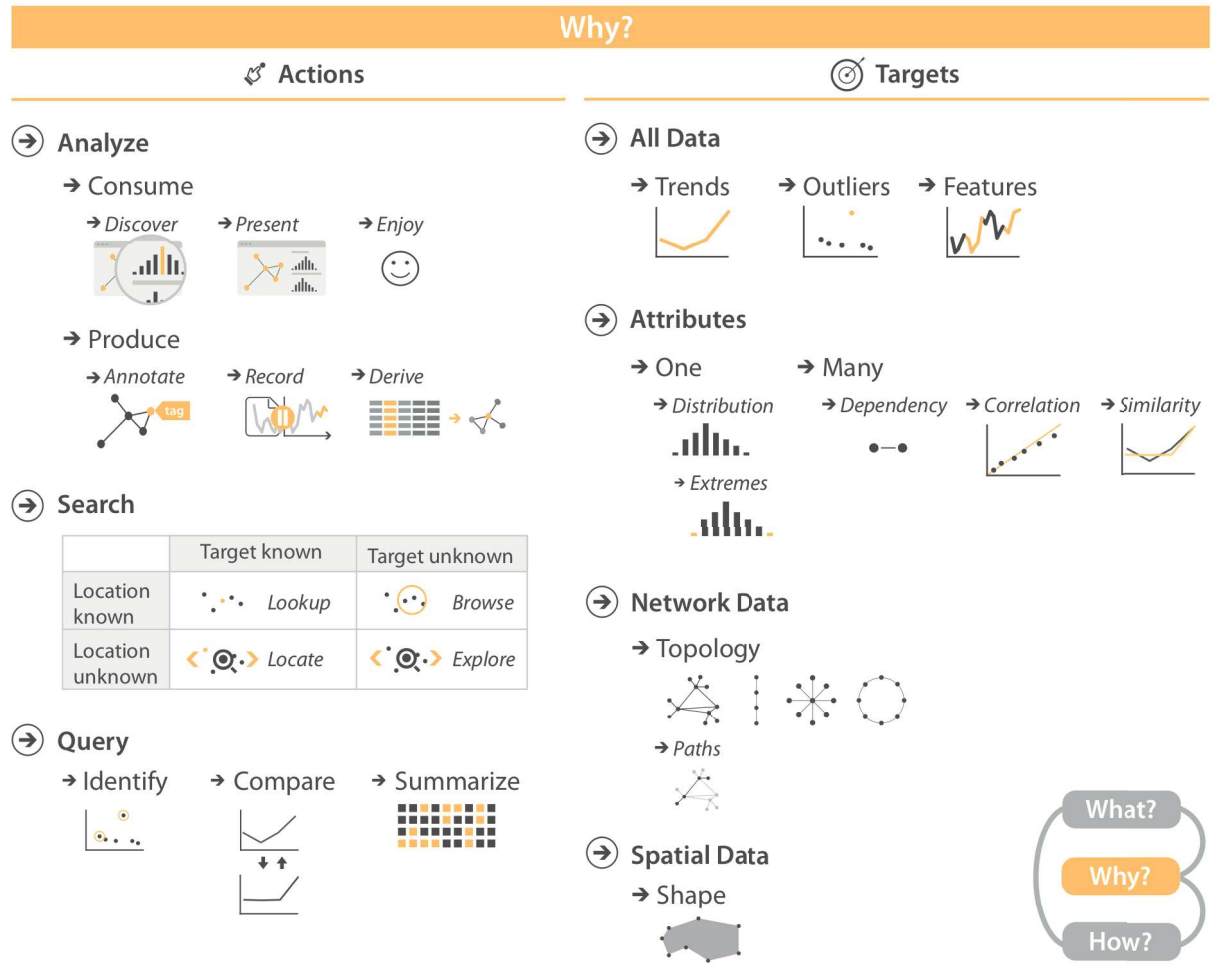

An Example

<https://earth.nullschool.net/#current/wind/surface/level/orthographic=-0.61,47.21,1137/loc=26.765,35.377>

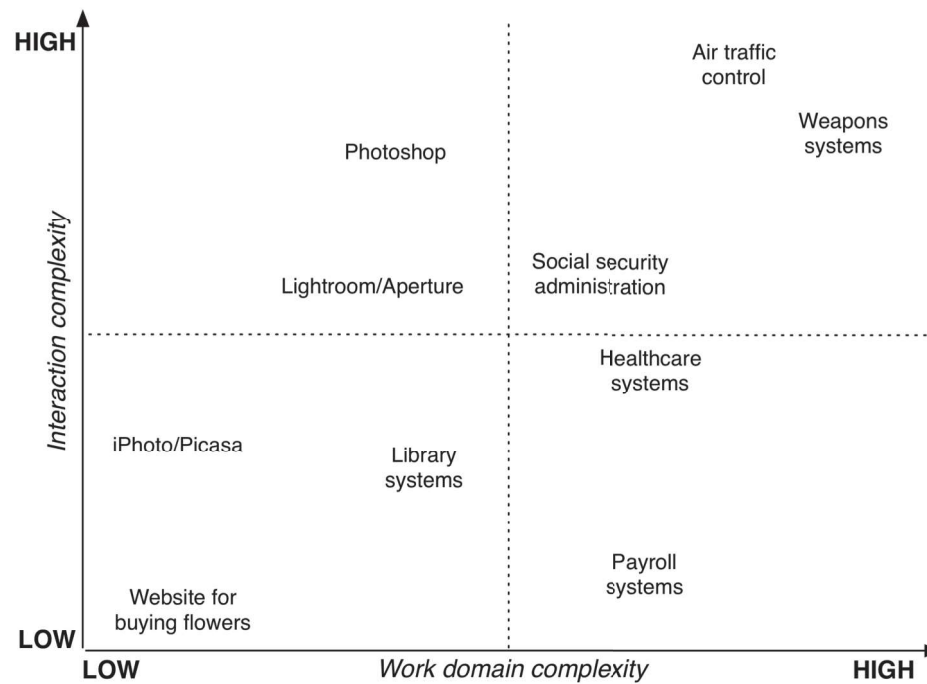

2. Task Abstraction

- Why analyse?
- Who?
- Actions (verbs):
 - Analyse
 - Produce
 - Search
 - Query
- Targets (nouns):
 - All data
 - Attributes
 - Network data
 - Spatial data

Who Is the Audience?

- Domain expert? Average web user? Namur resident? You?

How?...

How?			
Encode	Manipulate	Facet	Reduce
<ul style="list-style-type: none"> ⊙ Arrange <ul style="list-style-type: none"> → Express → Separate → Order → Align → Use ⊙ Map <p>from categorical and ordered attributes</p> <ul style="list-style-type: none"> → Color <ul style="list-style-type: none"> → Hue → Saturation → Luminance → Size, Angle, Curvature, ... <ul style="list-style-type: none"> → Shape <ul style="list-style-type: none"> → Motion <p><i>Direction, Rate, Frequency, ...</i></p> <ul style="list-style-type: none"> 	<ul style="list-style-type: none"> ⊙ Change ⊙ Select ⊙ Navigate 	<ul style="list-style-type: none"> ⊙ Juxtapose ⊙ Partition ⊙ Superimpose 	<ul style="list-style-type: none"> ⊙ Filter ⊙ Aggregate ⊙ Embed

An Introductory Example

How many encoded attributes?

An Introductory Example

- In this example...
 - 1) Two attributes (X categorical/Y quantitative)
 - 2) Two attributes (X quantitative/Y quantitative)
 - 3) Three attributes (X quantitative/Y quantitative/colour)
 - 4) Four attributes (X quantitative/Y quantitative/colour/size)
- Each attribute can convey one dimension...
- ... Or you can introduce **redundancy** between attributes...
- ... Some channels are **more efficient** for certain attributes...
 - E.g. bars in bar chart convey a sense of size better than scatterplots

Channel Types

- Two main types of channels: **identity** and **magnitude**
 - Identity: tells us information about *what* something is or *where* it is
 - Magnitude: tells us *how much* of something there is
- Identity example: shapes, hue, motion pattern...
- Magnitude example: line length, luminance, size...
- Linked to how the **human perceptual system** works
- -> **All channels are not equal!**

Break: A Small Brightness Test...

Edward H. Adelson

Channel Effectiveness: Accuracy

- Accuracy to assess channel effectiveness w.r.t. perception
- Demonstrated as exponential law

Steven's Psychophysical Power Law: $S = I^N$

S : perceived sensation
 I : physical intensity
 N : dependent of channel

Stevens, S. S. (2017). Psychophysics: Introduction to its perceptual, neural and social prospects. Routledge.

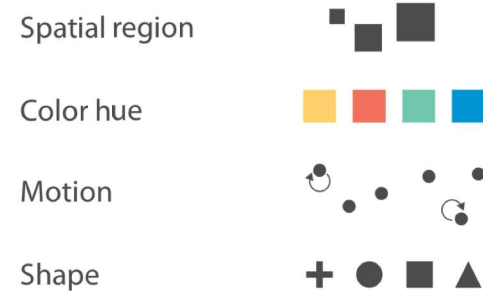

Channel Effectiveness: Ranking of channels

Channels: Expressiveness Types and Effectiveness Ranks

➔ **Magnitude Channels: Ordered Attributes**

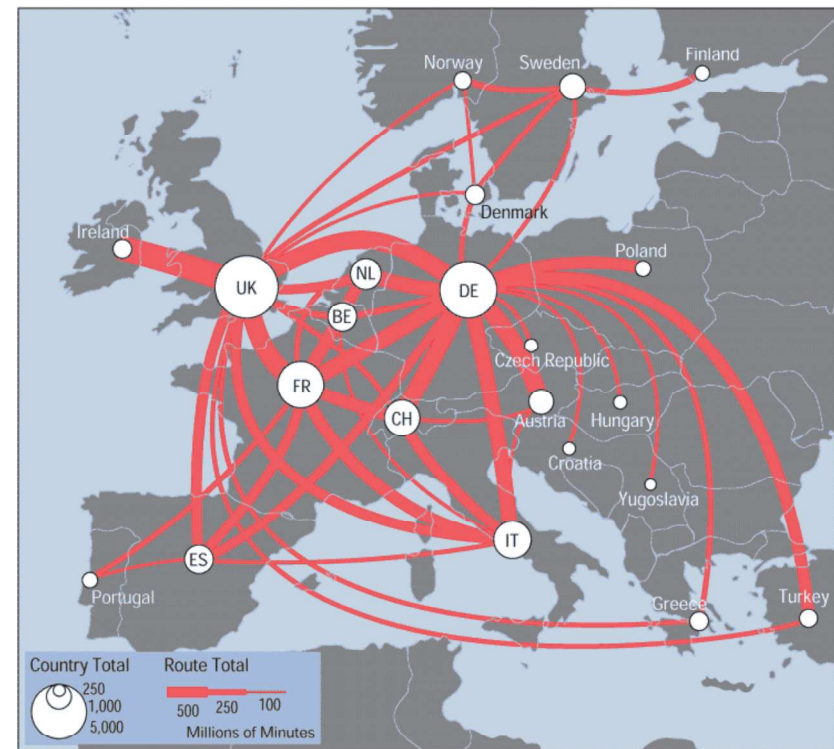

➔ **Identity Channels: Categorical Attributes**

Channel Effectiveness: Discriminability

- **Discriminability**: are the differences between items perceptible to the user?
- Concept of **bin** = distinguishable level within a visual channel
 - Exemple with line width: how many levels can you spot on this image?

https://mappa.mundi.net/maps/maps_014/telegeography.html

Colourmaps

- Colourmap = mapping between colours and data values
 - ~ visual encoding with colour

A. Single-hue progression to purplish-blue

B. Diverging progression from blue to gray

C. Orange-white-purple diverging scheme

D. Modified spectral scheme

E. Categorical color key

Ordered Colourmap Example

Alternative Colourmap for the Example Before

Ordered Colourmaps Example – Rainbow vs. Carefully Designed Colourmap

<https://www.research.ibm.com/people/l/lloyd/color/color.HTM>

Categorical Colourmaps: Colorbrewer

The screenshot displays the ColorBrewer 2.0 interface. At the top, it shows 'Number of data classes: 5' and 'Nature of your data: diverging'. A 'Pick a color scheme' section shows a grid of color options. The main map area shows a 5-class diverging scheme (PuOr) applied to a map of Europe, with colors ranging from red to blue. The interface includes various controls for 'Only show' (colorblind safe, print friendly, photocopy safe), 'Context' (roads, cities, borders), and 'Background' (solid color, terrain). A '5-class PuOr' legend is visible, listing the hex codes: #e66101, #fdb863, #f7f7f7, #b2abd2, and #5e3c99. The interface also includes an 'EXPORT' button and a 'color transparency' slider. The footer contains copyright information for Cynthia Brewer, Mark Harrower, and The Pennsylvania State University, along with links for 'Source code and feedback', 'Back to Flash version', and 'Back to ColorBrewer 1.0'. The 'axismaps' logo is also present.

<http://colorbrewer2.org/>

Examples of Visualisation Techniques

<https://github.com/d3/d3/wiki/Gallery>

Tools

- Two main approaches:
 - Dashboard-like tools
 - Visualisation libraries

```

<!DOCTYPE html>
<meta charset="utf-8">
<style>

.axis--x path {
  display: none;
}

.line {
  fill: none;
  stroke: steelblue;
  stroke-width: 1.5px;
}

</style>
<svg width="960" height="500"></svg>
<script src="//d3js.org/d3.v4.min.js"></script>
<script>

var svg = d3.select("svg"),
    margin = {top: 20, right: 80, bottom: 30, left: 50},
    width = svg.attr("width") - margin.left - margin.right,
    height = svg.attr("height") - margin.top - margin.bottom,
    g = svg.append("g").attr("transform", "translate(" + margin.left + "," + margin.top + ")");

var parseTime = d3.timeParse("%Y%m%d");

var x = d3.scaleTime().range([0, width]),
    y = d3.scaleLinear().range([height, 0]),
    z = d3.scaleOrdinal(d3.schemeCategory10);

var line = d3.line()
  .curve(d3.curveBasis)
  .x(function(d) { return x(d.date); })
  .y(function(d) { return y(d.temperature); });

d3.tsv("data.tsv", type, function(error, data) {
  if (error) throw error;

  var cities = data.columns.slice(1).map(function(id) {
    return {

```
