iDor Mobile™

now available
in 3G/4G
for iOS and
Android

iDor Mobile Solutions for Video Intercom

# Video Intercom for all your mobile devices — iPhone, iPad, iPod Touch and all Android phones and tablets!

The doorbell rings, but you're not expecting visitors. With the new iDor Mobile™ app, you can immediately see who's at your door. Using your iOS or Android device, you can now communicate with your visitors from your home or remotely on a 3G or 4G network.

- When someone rings your doorbell or presses the call button, an image automatically appears on your iPhone, iPad, iPod Touch, Android phone or tablet. You can now talk directly with your visitor and decide if you want to open the door.

- If you have multiple cameras installed, you can also switch between interior and exterior views of your home.

As long as you are within the wireless range of your home or are accessing a 3G or 4G network, iDor Mobile is always ready for you — it's the most useful innovation since the invention of the doorbell!

All you need to control the iDor Mobile app is the controller or iDor Mobile Cloud Service, a mobile device, a Siedle video intercom system, and a wireless or 3G/4G connection. Is your intercom system older? No problem — iDor Mobile is compatible with most video intercom systems.

The unique iDor Mobile app is available from the App Store and Google Play.
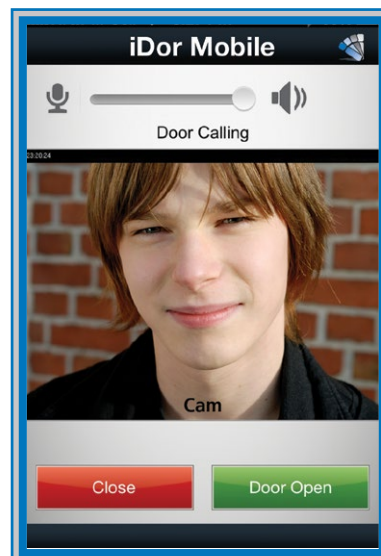

iDor Mobile, LLC | 300 Brickstone Square, Suite 201, Andover, MA 01810 | **978-662-5153** | (F) 978-662-5201 | info@iDorMobile.com | www.iDorMobile.com

iDor Mobile — Information when you need it.

When someone presses your doorbell or call button, iDor Mobile starts automatically, and a real-time picture of your door appears on the screen. Press the green button on your mobile device and you can immediately hear and speak to your visitor. To open the door, just tap "Open Door." To end the communication, tap the red button.

Other functions:

Adjust the intercom volume or mute the audio.

Mute the microphone on the iPhone or iPad.
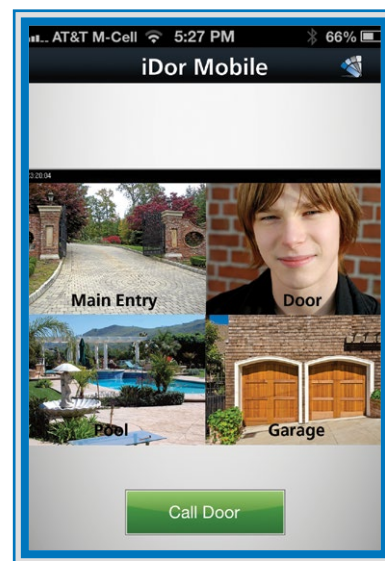

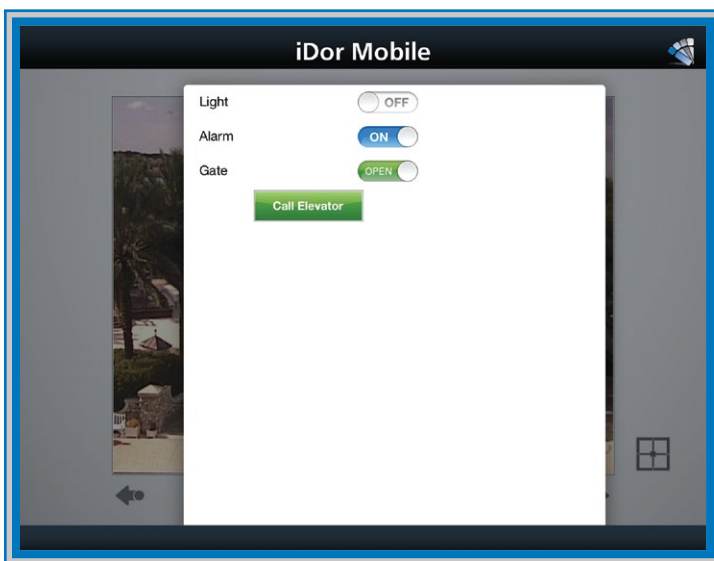

View a single camera or multiple cameras

You can view up to four cameras at a time.

Tap a particular camera to view in full screen. The dots at the bottom of the screen indicate how many cameras are available.

If more than four cameras are connected to your intercom system, you can switch between multiple camera views.

Switch back to single view.

Video Surveillance

Even if no one is at your door, you can monitor the outside of your home at any time. In this mode, you can access all the video functions of iDor Mobile. Just swipe from the bottom to the top of the screen to access all the switching and control functions.

3

iDor Mobile is easy to install.

The iDor Mobile-system consists of a compact iDor Mobile controller and the iDor Mobile app.

The iDor Mobile controller is easily connected to the analog telephone line of your video intercom system interface. In addition, the system requires only one power connection and a connection to your existing LAN installation. Analog video cameras can be connected with an optional video encoder.

The controller establishes the connection with your mobile device with either a WLAN or 3G/4G network connection. Thus, the iDor Mobile system is available to you anywhere in your home or garden. Establishing the connection requires only a few settings on the iPhone, iPad, iPod Touch, Android phone or tablet. Typically, these include your IP address and the port of the iDor Mobile controller or iDor Mobile Cloud Service. Once connected, you can adjust individual camera settings, the SIP Gateway, the intercom system, and all the switching and control functions.

To access the settings page, press and hold the gray area in the iDor Mobile app for three seconds.
