**NB! Please note that FancyBox used in Simple PopUp has a bug causing some issues on jQuery version 1.10.2 which is used in Joomla 3! (2014-02-28)**
**For Joomla 3, use the setting in backend for temporary fix!**

Simple PopUp - Pro Version contains some more advanced features...

Please review the **manual** here: Simple_PopUp.pdf

Here you can see the source of this page (as viewed in the Article Manager in Joomla back-end) including all the samples:
SimplePopUpProArticle.pdf

**Download from the menu to the right -------->**

**For demonstrations on the usage, SCROLL DOWN!**

Features:

- Simple PopUp, regular PopUp like the one demo:ed on the previous page.
- Multiple PopUp's on the same page using links to open them.
- Prevent the PopUp at page load (like on this page), but not on the previous page where the PopUp opens at page load.
- Use external content through URL, e.g. adding http://myserver.com/mypage.html
- Use image in PopUp, also using title (description) for images.
- Use it as a Image Gallery, open the first image and then have "next" and "previous" navigation buttons to change image.
- Cookie support added (2011-07-30)! You can chose to only show the pop-up once to each visitor. See the manual (above) for more information.
- Fix 2011-08-19: Resize/center on screen not working properly for FancyBox on mobile devices (e.g. Android, iPhone). This is now fixed.

For all the above features, check the manual on settings and usage.

As always, remember to comment and give your feedback!

Donate    and help me buy a new Motorola XOOM so I can help you while I am on the road... Please! :)

**Here are some of the new features displayed:**

To use it from a menu, first create a regular PopUp in an article on the page where you need it. Give it a name, e.g. name=MyPopUp and make sure that it works and pop's up on the page. Next set it to not popup automatically adding popup=false after the name attribute. Now you should have something like { simplepopup name=MyPopUp popup=false}TEXT IN POPUP{ /simplepopup }
Next go and create a menu item as "External URL". For the URL enter "#spucontentMyPopUp", that is #spucontent<NameOfYourPopup> (without any quotes of course). The set the advanced parameters and type the name of the popup in as "class", e.g. MyPopUp. And your done!
Just make sure the popup is loaded on the page where the menu is active!

{simplepopup name="test" title="Title for the lightbox" boxstyle=lightbox}

Here you will see a Lightbox style PopUp!

I have added this a a small test, just to see it if could be done...

## And it could!

{/simplepopup}

Click here to re-open the one on page load: {simplepopup link="test"}LiightBox style{/simplepopup}

{simplepopup link=youtube1}OPEN YOUTUBE{/simplepopup} (Only in 2.0)

{simplepopup name=youtube1 url="http://www.youtube.com/watch?v=eFysVOBriHk" popup=false video=true autoplay=true}URL1{/simplepopup}

{simplepopup link=article}OPEN ANY ARTICLE{/simplepopup}  (Only in 2.0)
This also has the new feature to hide close button and hide on clicking content or background!

{simplepopup name=article popup=false title="This is an article!

Click anywhere to close it!" articleid=24 hideonoverlayclick=true closebutton=false hideoncontentclick=true}URL1{/simplepopup}

{simplepopup link=fade}Transition testing, fade in, elastic out slowly{/simplepopup}  (Only in 2.0)
With this you can change the transition in and out and also the speed of it.

{simplepopup name=fade popup=false speedin=600 transitionin=fade speedout=1000}This was a fading box...{/simplepopup}

{simplepopup link=overl}Overlay changing{/simplepopup}  (Only in 2.0)
I have added a red more opac background (or overlay as it is called)

{simplepopup name=overl overlaycolor='red' overlayopacity='0.9' popup=false speedin=600 transitionin=fade speedout=500}Overlay changing{/simplepopup}

This is a {simplepopup link="simplelink"}**simple link**{/simplepopup} to open a PopUp!
{simplepopup popup="false" name="simplelink"}And this is what you'll see when opening the simple link.

I am sure you will come to think of much more cool stuff to put in here...

{/simplepopup}

With this {simplepopup link="donatelink"}link{/simplepopup} you will open up a very important **external URL**.

{simplepopup name="donatelink" url="donate.html"}link{/simplepopup}

Forms work too you know... Here a fake {simplepopup link="loginlink"}log in **form**{/simplepopup}.

{simplepopup name="loginlink"}

**Please login first:**

Username: [                    ]

Password: [                    ]

{/simplepopup}

Do you want to show images, you can use a **thumb-nail**, like so: {simplepopup link="popupimg"} {/simplepopup}

{simplepopup name="popupimg"}                                                                    {/simplepopup}

This is a {simplepopup link="closelink"}sample link{/simplepopup} to open a PopUp that has a **close link within**!

{simplepopup popup="false" name="closelink"}Oh,man! This one was way booooring... I want to close it!!!
The code for the link is: <a class="close-link" href="javascript:void(0);" onclick="javascript: jQuery.fancybox.close();">close it</a>{/simplepopup}

Do you want to show the **Joomla Login form**?
If so you can see a sample by clicking here, and then read the last few pages of the manual (found at the top of this page).

An **Image Gallery** can be viewed {simplepopup link="popupimg0" gallery="space" title="The title or description of images goes here"}here!{/simplepopup}

{simplepopup name="popupimg0" gallery="space"}
**Image Gallery through Simple PopUp!**

There are a few things to note here...

- As you can see you can mix content and images as you see fit.
- The title (description) must be added on the links, not the image tag (image tag is the text looking like {name_of-plugin}, with the curly brackets)
- Each PopUp box, image, URL or content, must have a link item but you can hide them using the parameter "hidden" (see the manual).
- If you want to show thumbs (like previous sample) you can do that too and not hide the links.

- Hover your mouse on the left/right edge of the image to get the "next" and "previous" buttons visible!

Pretty cool, right? ;)

{/simplepopup}

{simplepopup link="popupimg1" hidden="true" gallery="space"}here!{/simplepopup}
{simplepopup link="popupimg2" hidden="true" gallery="space"}here{/simplepopup}
{simplepopup link="popupimg3" hidden="true" gallery="space"}here{/simplepopup}
{simplepopup link="popupimg4" hidden="true" gallery="space"}here{/simplepopup}

{simplepopup name="popupimg1" title="The moon shot through Prime-focus with 200mm Newton tube and Canon EOS 500D, unmodded"}

{/simplepopup}

{simplepopup name="popupimg2" title="This was a test using my Canon EOS500D directly on the Mount, my

Celestron CG-5 Advanced GOTO"}
{/simplepopup}

{simplepopup name="popupimg3" title="I shot Jupiter straight in prime focus on my 200mm Newton tube"}

{/simplepopup}

{simplepopup name="popupimg4" title="Some random image from the INternet..."}

{/simplepopup}

Here is the same **gallery** but **using thumbs** instead. Open any image and then move through the rest... Give it a try!

| | | | |
|---|---|---|---|
| {simplepopup link="popupimg21" gallery="space2"}  {/simplepopup} | {simplepopup link="popupimg22" gallery="space2"}  {/simplepopup} | {simplepopup link="popupimg23" gallery="space2"}  {/simplepopup} | {simplepopup link="popupimg24" gallery="space2"}  {/simplepopup} |

{simplepopup name="popupimg21" titleposition="outside" title="The moon shot through Prime-focus with 200mm Newton tube and Canon EOS 500D, unmodded"}

{/simplepopup}

{simplepopup name="popupimg22" titleposition="outside" title="This was my old mount, my Celestron CG-5

Advanced GOTO"}                                                                                          {/simplepopup}

{simplepopup name="popupimg23" titleposition="outside" title="I shot Jupiter straight in prime focus on my 200mm

Newton tube"}
{/simplepopup}

{simplepopup name="popupimg24" titleposition="outside" title="This is a sunset"}

{/simplepopup}
